Stresses exceeding those listed in the Maximum Ratings table may damage the device. If any of these limits are exceeded, device functionality should not be assumed, damage may occur and reliability may be affected.

- 1. Current is limited by bondwire configuration.
- 2. Starting  $T_J$  = 25°C,  $\dot{L}$  = 40  $\mu$ H,  $I_{AS}$  = 64 A,  $V_{DD}$  = 80 V during inductor charging and  $V_{DD}$  = 0 V during time in avalanche.
- 3.  $R_{\theta,JA}$  is the sum of the junction-to-case and case-to-ambient thermal resistance, where the case thermal reference is defined as the solder mounting surface of the drain pins.  $R_{\theta,JC}$  is guaranteed by design, while  $R_{\theta,JA}$  is determined by the board design. The maximum rating presented here is based on mounting on a 1 in² pad of 2oz copper.
