<sup>&</sup>lt;sup>1)</sup> Practically the current is limited by the overall system design including the customer-specific PCB.

<sup>&</sup>lt;sup>2)</sup> The parameter is not subject to production test - verified by design/characterization.

<sup>&</sup>lt;sup>3)</sup> The product can operate at a specified current based on best practice to minimize electro-migration at the solder joint. For rare events and inrush currents, the value may be exceeded.

<sup>&</sup>lt;sup>4)</sup> Device on a four-layer 2s2p FR4 PCB defined in accordance with JEDEC standards (JESD51-5-7). PCB is vertical in still air.
